

# Sama Wahidee

Full-Stack Software Engineer

+970 59-847-3729 | samawahidee@gmail.com | Ramallah, Palestine | [linkedin.com/in/sama-wahidee](https://www.linkedin.com/in/sama-wahidee) | [github.com/Sama-wahidee](https://github.com/Sama-wahidee)

## PROFESSIONAL SUMMARY

Computer Science graduate specializing in full-stack development with React, Node.js, and MySQL. Experienced delivering production-ready web and desktop applications end-to-end — from database design and REST APIs to packaged Electron desktop builds. Applied the VIKOR multi-criteria algorithm to build an AI-driven recommendation engine. Focused on writing clean, maintainable code that ships.

## TECHNICAL SKILLS

- Languages: Java, Python, C#, JavaScript/TypeScript
- Web & Backend: React, Node.js, Express.js, FastAPI, Electron, REST APIs, JWT Authentication, ASP.NET (MVC)
- Databases: MySQL — schema design, query optimization, relational modeling
- Tools & Platforms: Git, GitHub, Postman, Jira, Figma, Selenium
- QA & Testing: Unit Testing, Integration Testing, Black-Box Testing, White-Box Testing, Automated UI Testing

## PROFESSIONAL EXPERIENCE

**.NET Web Development Trainee** | *Experts Turnkey Solutions, Ramallah* Jul 2024 – Aug 2024

- Trained in ASP.NET and C# web development within an MVC architecture, contributing to a Task Management System with task creation, role assignment, and status tracking.
- Gained hands-on backend development experience through structured, team-based project delivery.

## PROJECTS

**Truck Parts Inventory & Warehouse Management System** | *Client Project 2026*

Full-stack desktop and web application for managing truck spare parts inventory, warehouses, purchasing, sales, and stock movement across multiple locations — React, Node.js, Express, MySQL, Electron.

- Built a responsive React/TypeScript frontend packaged as a cross-platform Electron desktop application, including search, filtering, pagination, and an analytics dashboard with key business metrics.
- Designed RESTful APIs and a normalized MySQL database to manage inventory, warehouses, suppliers, purchases, sales, and users across multiple locations.
- Implemented real-time, warehouse-specific stock tracking with automatic inventory updates after purchases, sales, and transfers.
- Built purchasing and sales modules with invoice generation, barcode-based product lookup.
- Implemented JWT-based authentication and role-based authorization; optimized SQL queries for large inventories.
- Packaged the application as a standalone Windows installer using Electron Builder and pkg, resolving ESM-to-CommonJS migration, environment-variable bundling, and snapshot path issues for non-technical end users.
- Validated the system through unit and integration testing of API endpoints and database operations, plus manual black-box and white-box testing across modules before client delivery.

## **Murab — Equestrian Web Platform** | *Graduation Project 2025*

*Multi-role platform for horse breeders, owners, and event organizers — React, Node.js (Express), MySQL, FastAPI.*

- Designed and developed a multi-role platform from the ground up serving breeders, horse owners, and championship organizers, with role-based dashboards tailored to each user type.
- Built a breeding recommendation engine using the VIKOR multi-criteria decision-making algorithm, scoring and ranking horses across multiple weighted attributes (pedigree, performance history, physical traits) to recommend optimal breeding pairings.
- Implemented a horse and equipment marketplace with advanced filtering, detailed listings, and a responsive UI for browsing and publishing listings.
- Developed a championship management module supporting event posting, owner/horse registration, and role-based access control for organizers.
- Integrated a stable directory enabling owners to publish services, locations, and contact information, plus a verified expert publishing system for horse care, training, and breeding articles.
- Led quality assurance for the platform: wrote and executed unit and integration tests for core modules, and performed structured white-box and black-box testing to validate functionality, edge cases, and cross-role access control.
- Ensured cross-device responsiveness through manual and automated UI testing across breakpoints.

## **EDUCATION**

---

### **Bachelor of Computer Science** | *Birzeit University, Ramallah, Palestine 2021 – 2025*

#### **Relevant Electives:**

- Software Quality Assurance & Testing — unit, integration, black-box, and white-box testing methodologies applied across course and client projects.
- Web Services — designing and consuming SOAP/REST-based service architectures.
- Serious Gaming (SG) Fundamentals — game design principles applied to educational and training simulations.
- Data Science and Analytics — data wrangling, statistical analysis, and visualization for decision-making.
- Sp. Topics: Encryption Theory — cryptographic algorithms and secure data transmission.
- Animation — motion and visual design fundamentals for interactive media.

## **CERTIFICATIONS & TRAINING**

---

- SPMW — Gaza Sky Geeks (2022)
- Robot and AI Program — Purpose Company (2022)
- Design Thinking Workshop — Samah Abu Assab (2023)

## **LANGUAGES**

---

- Arabic — Native
- English — Full Professional Proficiency
